

Bear VFD / FEATURES

Efficient transformation/

The PD ESretrofitting of existing pumping stations means that substantial energy savings can be achieved, especially when operating under partial loads. It can be efficiently transformed into any standard asynchronous pump motor suitable for variable speed drive operation.

Due to the unique IP65 protection level direct installation method of PD ES, it is quick, simple and low-cost to retrofit, with a power range of 0.75 to 900kW (1 to 1200 HP).

Efficient configuration/

The modular design of PD ES makes it fundamentally different from ordinary variable speed pump drives. You can efficiently configure almost any pump arrangement according to your needs. It can up to six pumps can be combined.

Efficient energy use/

PD ES's intelligent control system can precisely adapt to needs, so it will only use energy consumption on demand. No more, no less.

This can not only reduce your energy expenditure to 70% of the original, but in many cases, it can also enable you to qualify for the national energy saving award in the field of its application. So these can make up for your transformation and daily operating costs.

ability	Power consumption according to the curve		Energy saving	Every 1/3 year (2.920 hours) Energy saving
	pump is running at a constant speed	pump is running at a variable speed		
25 %	5,8 kW	1,8 kW	4,0 kW	11.680 kWh
50 %	7,6 kW	3,2 kW	4,4 kW	12.848 kWh
75 %	9,2 kW	5,7 kW	3,5 kW	10.220 kWh
1 year (8.760 hours) energy saving				34.748 kWh

Economy/

The cost saving is not only reflected in the energy saving, which saves the customer's use cost! The pump operation and monitoring protection logic is built into the PD ES inverter, so that it does not require additional relays, contactors, PLC can realize the function of controlling and protecting the water pump and motor, the operation is simple, no professional electrical engineer is required. The installation can also be completed quickly, which greatly saves raw material and labor costs. PD ES contains a variety of innovative functions,Soft start and stop, extend the life of water pump, motor and pipeline to the greatest extent.

Easy to debug and operate/

The new start menu makes every step of the PD ES debugging operation flow clear at a glance, The LCD screen can display the parameters of the extended series on each page,Make parameter setting faster and more convenient. In addition, the start-up menu provides an extended series of pre-pro-grammed parameters for standard motors, You only need to select your motor size, The rest of the work is done by PD ES.

Easy to install/

The design of PD ES can be easily adapted to any type of water pump. The newly added wiring method includes a separate mounting board and a set of IP65 protection class air switch device (optional). This is simple to install and use, and it can also be connected safely and conveniently, and it also protects the electronic components of the device. The back-to-back installation further simplifies the installation procedure for connecting the motor.

Under control

Not under control

How to decrease the not control cost by Bear VFD

- **Save Energy cost**

Constant pressure, Reduce your energy expenditure up to 70% of the original.

- **Save maintenance cost**

Reduce the general duty on mechanical and bearing, and the QTY of rotation, prolong the maintenance interval, substantially reduce the cost of Spare parts and work cost.

- **Special design for motor protection**

Over 90% motor broken is because of over heat; Internal build terminal read PTC , Protect demaging from overheat , motor lifetime increases 5~10years.

- **Dry run protection**

Dry running is big damage for mechanical seal , put a dry run sensor on the suction pipe then connect with our VFD will avoid it happen.

- **Pipe bursting protection**

How to avoid the pump room to be flooded because of the pipe bursting? Use a electric level sensor and connect VFD will help you solve it easily.

- **Pump bearing monitoring**

The most obvious phenomenon of pump problems are vibration or bearing overheat, how to find the problem at the first time to avoid the pump be broken?

Use a PT100 or vibration sensor on the pump bearing, then connect with VFD will help you extend your pump life time.

- **Avoid water hammer**

No matter positive or negative water hammer, they all have big damage for pipe system and pumps, when you use VFD you will get a soft start and soft stop function, decrease the system damage because of water hammer.

Bear VFD / TECHNICAL PARAMETER

Model	Instruction
Power	0.75kW~1000Kw
Input rated voltage and frequency	1PH/3PH AC 220V 50/60Hz;3PH AC380V 50/60Hz; 3PH AC 500V 50/60HZ
Allowable/Working voltage range	220V:170~220V; 380V: 330V~440V ; 500V: 425~575V
Output voltage	220V:0~220V;380V: 330V~440V ; 500V: 425~575V
Analog input signal	0~10v; 4~20mA
Analog output signal	0~10v; 4~20mA
Output frequency / accuracy	0.1~400.0 Hz / 0.1Hz
Control command source	0: keyboard operation, 1: I / O terminal, 2: RS communication, 3: automatic start; 4: Z communication control, channel 1 and 2 are main
Built in PID controller	Used for closed-loop control with feedback.
Acceleration / deceleration time	0 ~ 999.9s, acceleration / deceleration time can be set respectively
RS485 and Can	1-way standard RS485 communication function (Modbus); 1-way internal pump station communication
Protection mechanism	Overload protection, over-voltage protection can be set, under voltage protection can be set, short circuit protection, over-current protection, parameter locking
Overload capacity	150% rated current / 60s, 180% rated current / 3S
Protection class	IP65 / IP20
Ambient temperature / humidity	-10℃to 40℃(no ice) / below 95% (no condensation)
Display	4 digit nixie tube display, indicator light display, display setting frequency, output frequency, output current, DC bus, etc
Installation mode	Back mounted / Wall mounted

01

Single pump operation

Soft start/stop function uses a frequency converter

02

Multi pump operation (Cascade controller-relay)

Use a frequency converter
(including additional advanced cards)
to control up to 6 full-speed slave pumps

03

Multi-pump operation

(Multi-pump communication by RS485)

Use multiple inverters in combination
(up to 6 pumps can be combined)

0.75~30KW

37~560KW

Bear VFD / COMPARATIVE ADVANTAGE

Perfect /software and hardware solutions

01

Dual-core processor : increases the speed of data processing,intelligent control mode

02

Two kinds motor for choice : Equipment control with both asynchronous motors and synchronous motors.

03

Special industrial grade fiberglass material PCB board-The assemble of the microcircuit is basedon Samsung technology. And Protective paint Acid and alkali resistance aging resistance.

04

Control Board: Low frequency ,high torque Automatic voltage regulation

05

Excellent IGBT MODULE

06

Cooling fan: Low noise,dust-proof
